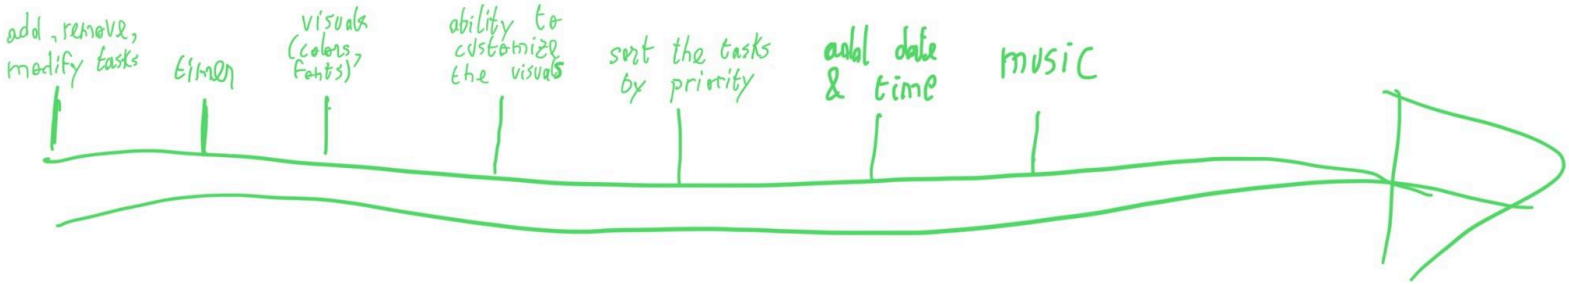
PomoTask

I. Members: Val Tlahuice, Anh Nguyen, Jeremy Rafidimanana

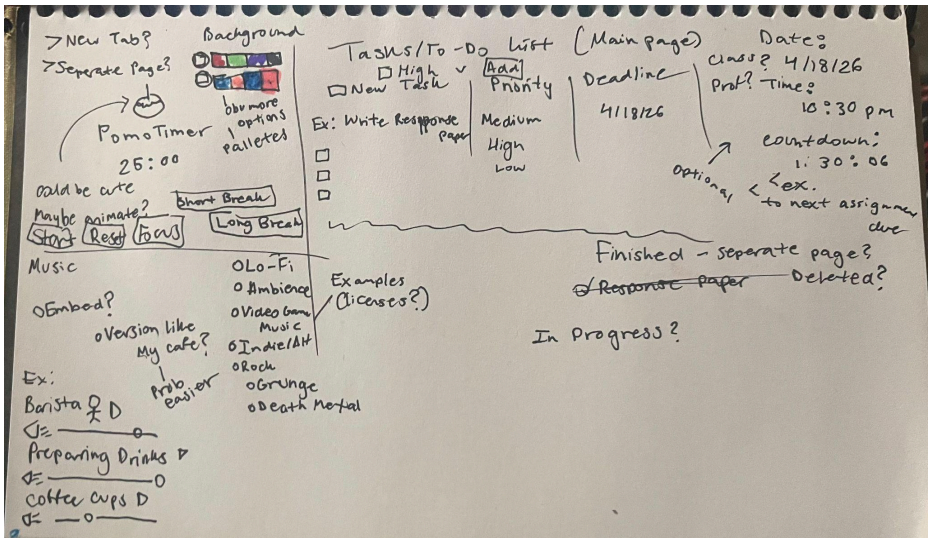
II. Potential project's roadmap:



III. Description:

PomoTask is a combination of a To-Do list and a pomodoro timer with built-in music in the style of "*I Miss My Cafe*".

IV. Drawings, if appropriate – could be the UI, or a high-level diagram of the workflow/user interaction, etc.



V. Tell us why your project is cool, interesting, useful, and so on!

Our combination of pomodoro timer, to do list and music in one is useful because users can access productivity help that either often requires multiple websites/apps/software and we will hopefully give users the ability to customize the background and the music we offer is royalty free.

And all of these functions will be on 1 page only → easy to follow and stay focused.

VI. Describe a smaller, initial version of your project that you can build first. This will be a prototype, or proof of concept, or "minimum viable product". Something with a scope smaller than the full project.

The "minimum viable product" that we are going to make would be a task manager from which we'll be able to add, remove, and modify tasks. We would also add some design with visuals like colors, fonts, layout, and we will also add a timer if possible.

VII. Action Plan

Jeremy Rafidimanana To-Do List	- Add and delete tasks - Mark task as done (checkbox / strike-through) - Scrollable task list display	Soft DL: Apr 28
Val Tlahuice Pomodoro Timer	- 25 min work / 5 min break countdown - Start, pause, reset buttons - Auto-switch between work and break - Time display (MM:SS)	Soft DL: Apr 28
Anh Nguyen Music + Layout	- Embed lofi/cafe-style audio - Play, pause, volume control - Arrange all 3 panels into one page - Overall UI polish	Soft DL: Apr 30

⇒ final DL: May 4th 2026

VIII. Peer feedback

After seeking for another student's feedback, we got told that the drawing is a bit messy but with some explanation, it gets more clear. And the student particularly liked the different features that this task manager offers, for example the countdown, the palette, the different choices of music or even the priority manager. Overall, he really liked the design because it was pretty detailed and gave him a pretty good idea of our project.
